

Nuclear Medicine Scintimammography Scan

Your doctor would like you to have a Nuclear Medicine scan and has arranged for you to visit our department. We would like your visit to be as pleasant as possible and hope this leaflet will answer some of the questions you may have. Should you have any questions regarding your appointment please contact us on one of the telephone numbers below between 9:00am and 5.00pm Monday- Friday.

0300 131 4797 or 0300 131 5853

WHAT IS A SCINTIMAMMOGRAPHY SCAN?

A scintimammography scan is a way of taking pictures of the breast. Images are taken using a Gamma Camera. A small amount of radioactivity is used to produce these pictures. The pictures will help your doctor understand your condition.

IS THE SCAN SAFE?

The amount of radiation you receive is as small as possible and is similar to other X-ray procedures. The radioactivity leaves the body very quickly and it will not make you feel sick or sleepy.

DO I NEED TO PREPARE FOR THE SCAN?

You do not need to do anything special. You can eat and drink normally and keep taking your tablets. You should wear loose fitting comfortable clothing.

IS THERE ANYTHING I SHOULD TELL THE STAFF BEFORE THE SCAN?

Women should tell us if they are pregnant, if they think they may be pregnant or if they are breast-feeding. Women between the ages of 12 and 60 will be asked to sign a form on the day of their test to confirm they are not pregnant. If there is any doubt then, by law, we have to perform a pregnancy test before we can do your test.

WHAT IS INVOLVED?

Shortly after you arrive you will be asked to remove all your clothing above the waist and to wear a hospital gown. You will then be given an injection of a radioactive tracer. The tracer is injected into a vein in the foot. The tracer then travels to the breast. After the injection you will be asked to lie face down on the imaging table, which has a specially made mattress to accommodate the breasts.

The camera will then take images of the sides and front of the breasts. To do this the camera will be moved into several different positions. There is no compression of the breast during the scan.

The scan takes approximately 45 minutes.

PRECAUTIONS AFTER THE INJECTION

After your injection you should avoid prolonged close contact with pregnant women and children for 24 hours. Children and pregnant women should not accompany you to the department. You should also avoid blood tests and dental visits during this time. If you are planning to travel abroad within 7 days after your appointment, please inform the staff during your appointment.

WHAT CAN I DO AFTER THE SCAN?

You can go home or to work. You can drive a car and eat and drink normally.

WHAT HAPPENS TO THE RESULTS?

We cannot give you the results of your test. We will send a report to the doctor who asked for the scan as soon as possible.

CONSENT

Although you consent for this treatment, you may at any time after that withdraw such consent. Please discuss this with your medical team.

SOURCES OF INFORMATION

British Nuclear Medicine Society (BNMS)

IMPORTANT INFORMATION

The information in this leaflet is for guidance purposes only and is not provided to replace professional clinical advice from a qualified practitioner.

YOUR COMMENTS

We are always interested to hear your views about our leaflets. If you have any comments, please contact the Patient Experience Team – Tel: 0300 131 4731 or email: esh-tr.patientexperience@nhs.net

HAND HYGIENE

The Trust is committed to maintaining a clean, safe environment. Hand hygiene is very important in controlling infection. Alcohol gel is widely available for staff use and at the entrance of each clinical area for visitors to clean their hands before and after entering.

OTHER FORMATS

If you require any of the Trust leaflets in alternative formats, such as large print or alternative languages, please contact the Equality and Human Rights Department.
