

Your child's Nuclear Medicine Hepatobiliary (HIDA) Scan

Your doctor would like your child to have a Nuclear Medicine HIDA scan and has arranged for you to visit our department. We would like your visit to be as pleasant as possible and hope this leaflet will answer some of the questions you may have. Should you have any questions regarding this appointment please contact us on the appropriate telephone number below:

- Conquest Hospital appointments - Tel: (01424) 755255 Ext: 7422
- Eastbourne DGH appointments - Tel: (01323) 414917

What is a HIDA scan?

A HIDA scan assesses the function of the Liver, Bile Ducts and Gall Bladder. The scan may be performed in patients that do not have a gall bladder. Images are taken using a Gamma Camera. A small amount of radioactivity is used to produce these pictures. The pictures will help your doctor understand your child's condition.

Is the scan safe?

The amount of radiation your child receives is as small as possible and is similar to other X-ray procedures. The radioactivity leaves the body very quickly and it will not make your child feel sick or sleepy.

Is there any preparation for the scan?

If possible your child should have nothing to eat or drink for 4 hours before the scan. If this is not possible they may drink clear fluids such as water or squash. They may eat as normal after the scan.

What is involved?

If your child is aged 11 or under, you will need to report to the children's ward first. If you are attending Eastbourne DGH this will be the Friston paediatric short stay ward (on level 2), if you are attending Conquest this will be Kipling paediatric ward (on level 1), please report to the paediatric ward at the time given on the enclosed letter.

If your child is aged 12 or over, please report straight to radiology reception (Conquest Hospital) or radiology reception 2 (Eastbourne DGH).

Whether on the children's ward or in radiology, a local anaesthetic cream will be applied to your child's skin over 2 or 3 areas on their arms or hands. After approximately 1 hour a cannula needle will be placed into a vein in the arm or hand that has been numbed. When this has been done, if you have been to the children's ward, please report to the Radiology department, where you will be directed to Nuclear Medicine.

In the Nuclear Medicine department your child will need to lie down on the scanning bed on their back. The scanner will be positioned close to their abdomen. We will then administer a radioactive tracer through the cannula needle. The scan will begin immediately and takes up to 2 hours. Your child will need to keep very still during the scan. Occasionally it may be necessary to perform additional scans later that day or the following day. We will inform you after the first scan if this is necessary. We do not expect any adverse reactions to the tracer injection.

Precautions after the injection

If your child uses nappies please place any used nappies directly in an outside bin for up to 24 hours after the injection as some of the radioactive tracer will be present in your child's urine. Children and pregnant women should not accompany your child to the department. Your child should also avoid blood tests and dental visits during this time. If your child is travelling abroad within 7 days after the appointment please inform the staff during the appointment.

What can my child do after the scan?

Your child can eat and drink normally.

What happens to the results?

We will send a report to the doctor who asked for the scan as soon as possible.

Consent

Although you consent for this treatment, you may at any time after that withdraw such consent. Please discuss this with your medical team.

Important Information

The information in this leaflet is for guidance purposes only and is not provided to replace professional clinical advice from a qualified practitioner.

Your Comments

We are always interested to hear your views about our leaflets. If you have any comments, please contact the Patient Experience Team – Tel: (01323) 417400 Ext: 5860 or by email at: esh-tr.patientexperience@nhs.net

Hand Hygiene

The Trust is committed to maintaining a clean, safe environment. Hand hygiene is very important in controlling infection. Alcohol gel is widely available at the patient bedside for staff use and at the entrance of each clinical area for visitors to clean their hands before and after entering.

Other Formats

If you require any of the Trust leaflets in alternative formats, such as large print or alternative languages, please contact the Equality and Human Rights Department.
