

Nuclear Medicine Kidney (DMSA) Scan

Your doctor would like you to have a Nuclear Medicine scan and has arranged for you to visit our department. We would like your visit to be as pleasant as possible and hope this leaflet will answer some of the questions you may have. Should you have any questions regarding your appointment please contact us on one of the telephone numbers below between 9:00am and 5:00pm Monday- Friday.

0300 131 4797 or 0300 131 5853

WHAT IS A DMSA SCAN?

A DMSA scan is a way of taking pictures of your kidneys. Images are taken using a Gamma Camera. A small amount of radioactivity is used to produce these pictures. The pictures will help your doctor understand your kidney function.

IS THE SCAN SAFE?

The amount of radiation you receive is as small as possible and is similar to other X-ray procedures. The radioactivity leaves the body very quickly and it will not make you feel sick or sleepy.

DO I NEED TO PREPARE FOR THE SCAN?

You do not need to do anything special. You can eat and drink normally and keep taking your tablets. You should wear loose fitting comfortable clothing.

IS THERE ANYTHING I SHOULD TELL THE STAFF BEFORE THE SCAN?

If you have had a kidney infection within **6 months** of your appointment date please inform a member of our staff when you receive this appointment.

Women should tell us if they are pregnant, if they think they may be pregnant or if they are breast-feeding. Women between the ages of 12 and 60 will be asked to sign a form on the day of their test to confirm they are not pregnant. If there is any doubt then by law we have to perform a pregnancy test before we can do the test.

WHAT IS INVOLVED?

Shortly after you arrive you will be given a small injection in a vein in your arm or hand. The injection is a radioactive tracer that is absorbed by your kidneys. We do not expect you to have any side effects to the injection. Your scan will take place 3-4 hours later.

You will be asked to empty your bladder just before your scan. The scan involves taking pictures while you lie on your back on a bed. The camera is placed close to your abdomen and images will be taken for approximately 30 minutes.

PRECAUTIONS AFTER THE INJECTION

You should avoid prolonged close contact with pregnant women and children for 24 hours. Children and pregnant women should not accompany you to the department. You should also avoid blood tests and dental visits during this time. If you are planning to travel abroad within 7 days after your appointment please inform the staff during your appointment.

WHAT CAN I DO BETWEEN THE INJECTION AND THE SCAN?

You can leave the hospital or stay with us. Meals and snacks may be bought in the hospital. If possible you should drink plenty of fluids and empty your bladder frequently.

WHAT CAN I DO AFTER THE SCAN?

You can go home or to work. You can drive a car and eat and drink normally.

WHAT HAPPENS TO THE RESULTS?

We cannot give you the results of your test. We will send a report to the doctor who asked for the scan as soon as possible.

CONSENT

Although you consent for this treatment, you may at any time after that withdraw such consent. Please discuss this with your medical team.
